Amendments to the Claims:

- 1 7. (canceled)
- 8. (currently amended) An air-permeable, water impermeable structure comprising an air-permeable water impermeable substrate having a first surface and a second surface opposite the first surface, a partial adhesive surface coating, wherein the partial a first adhesive surface coating is deposited in a discontinuous pattern on both surfaces the first surface of the substrate and

<u>a second adhesive surface coating deposited in a discontinuous pattern on the second surface</u> of the substrate and wherein

the <u>discontinuous</u> adhesive surface coating <u>pattern</u> of the <u>one side first surface</u> of the substrate is at least partially aligned with the <u>discontinuous</u> adhesive surface coating <u>pattern</u> of the second <u>side surface</u>, so that the <u>film substrate</u> has areas which are coated on both surfaces and areas which are uncoated on both surfaces.

- 9. (currently amended) A film substrate according to claim 8, wherein the surface coating includes coatings include adhesive dots.
- 10. (currently amended) A sheet formation containing

[a middle,] <u>an</u> air permeable, water impermeable substrate <u>having a first surface</u> and a second surface opposite the first surface,

a first sheet of <u>a</u> material laminated to <u>a</u> the first surface of the substrate <u>by a</u> first adhesive coating on the first surface of the substrate, and

a second surface sheet of a material laminated to a the second side surface of the substrate by a second adhesive coating on said second surface of the substrate,

wherein <u>both</u> the <u>substrate has a partial first and second</u> adhesive surface <u>coating coatings are</u> deposited <u>in discontinuous patterns</u> on both the first and second surfaces of the substrate, <u>and</u> the adhesive surface coating <u>pattern</u> of the first surface of the substrate is at least partially aligned with the adhesive surface coating <u>pattern</u> of the second surface <u>of the substrate</u>, so that the substrate has areas which are coated on both the first and second surfaces and areas which are uncoated on both the first and second surfaces and

of the substrate are attached thereto by means of the adhesive surface coatings deposited on the first and second surfaces of the substrate.

- 11. (currently amended) A sheet formation according to claim 11 10, wherein the adhesive surface coating of the first surface of the substrate is only partially aligned with the adhesive surface coating of the second surface.
- 12. (currently amended) A sheet formation An air permeable, water impermeable structure according to claim 8, wherein the adhesive surface coating of the first surface of the substrate is only partially aligned with the adhesive surface coating of the second surface.
